

## Stedman Spinner

This spinner is designed to help conductors quickly determine which bells are affected or not by some popular two-course touches of Stedman Triples. Simply pick your **observation bell** and see!

### **Twin bobs** (four options):

Call bobs at S or H or L or Q, repeated; the boxes show the bells left **unaffected**.

### An **odd bob** touch:

Call a bob to take effect when the observation bell enters the slow work, and another to take effect when it leaves; repeat. (If the 7 is observation bell, for example, the calls would be at 3 and 8.) The arrows point to the bells left **unaffected**.
